<i>Matthew T. Provencher, Michael Kuhne,
Anthony A. Romeo, Neil Ghodadra,
and Nicole Boniquit</i> |

On the Cover: A 33-year-old man sustained a hyperextension injury to the right knee. Arthroscopic image of the medial compartment demonstrates an isolated medial meniscus capsular avulsion. The anterior arm of the semimembranosus tendon is visualized through the capsular avulsion running obliquely across the posterior aspect of the medial compartment, inferior to the medial meniscus. An inside-out meniscus repair was subsequently performed. Courtesy of Kimberly A. Turman, M.D., and Mark D. Miller, M.D.
