

Chest X-ray quiz

Compiled by Marea Reading RN, Consultant Cardiothoracic Nursing Education

Question

This is a supine anterior-posterior (AP) chest X-ray of a patient who has undergone a double lung transplant. She is now 40 years of age. She was diagnosed with lymphangiomyomatosis 2 years ago. This is her first post-operative chest X-ray. Are you happy with the location of the pulmonary artery (Swan-Ganz) catheter? What other comments would you make/check about this first post-operative chest X-ray?

For answer and discussion turn to page 98 of this issue.
