Techniques in aging face surgery continue to evolve. This occurs inevitably as we gain further understanding of the effects of aging upon the human face and as we extend the boundaries of surgical intervention to better counter these effects. The authorship featured in this issue of the *Facial Plastic Surgery Clinics of North America* is a gathering of recognized experts in the field of facial plastic surgery. The authors openly share their experience and expertise in offering solutions to the complex problems of aging face rejuvenation. A variety of surgical approaches and techniques are

presented, providing the reader with a broad perspective of the topic. These superb articles offer guidance to both the surgeon-in-training as well as the advanced practitioner seeking tips to refine approach and technique.

As Guest Editor of this issue, I am grateful to each of the authors and the editors at Elsevier, all of whom devoted a great deal of time, energy, and effort toward this endeavor. It was a pleasure and privilege to collaborate with such talented colleagues to bring this issue to fruition. I hope you enjoy it.
